

## ACT Influenza Surveillance Report – No. 15, 2018

**Summary:** Influenza notifications being received by ACT Health remain low, but just above background levels, and continued to decrease in the last week.

### Influenza notifications

*Reporting Period: 1 January to 14 October 2018, Weeks 1-41*

Between 1 January and 14 October 2018, there were 404 notifications of influenza reported to ACT Health, of which 29 occurred in the last fortnight. In comparison, there were 3,000 notifications of influenza reported to ACT Health during the same time period in 2017. Influenza notifications being received by ACT Health remain low, but just above background levels, and continued to decrease in the last week (Figure).

Year to date, 74.8% of notifications (n=302) were influenza A and 25.0% of notifications (n=101) were influenza B. There has been one notification of a case co-infected with influenza A and B (0.2%). Of the 105 influenza A notifications with subtype information available, 84 (80.0%) were H1N1 and 21 (20.0%) were H3 (presumed H3N2).

Overall, notifications have been highest among adults aged 30-39 years (15.8%, n=64), followed by children aged 0-4 years (13.4%, n=54) and children aged 5-9 years (13.1%, n=53).

**Figure. Number of influenza notifications, by week\* and year of onset, 1 January 2013 to 14 October 2018, ACT.**

*\*Data provided for the current and most recent weeks may be incomplete. All data are preliminary and subject to change as updates are received. Notification data include all cases diagnosed in the ACT in residents of the ACT. Generally, notified cases represent only a small proportion of cases of influenza occurring in the community.*

Notification data were exported on 16 October 2018 for the period 1 January 2013 to 14 October 2018, by onset date.
