

# Addressing mental health and alcohol/other drug use comorbidities: The National Comorbidity Guidelines project.

**Dr Alana Fisher**

**Postdoctoral Research Fellow**

**The Matilda Centre for Research in Mental Health  
and Substance Use.**

## Overview

- Current issues in comorbidity
- Current developments to promote best practice in managing comorbidities.
- Further developments in the National Comorbidity Guidelines project

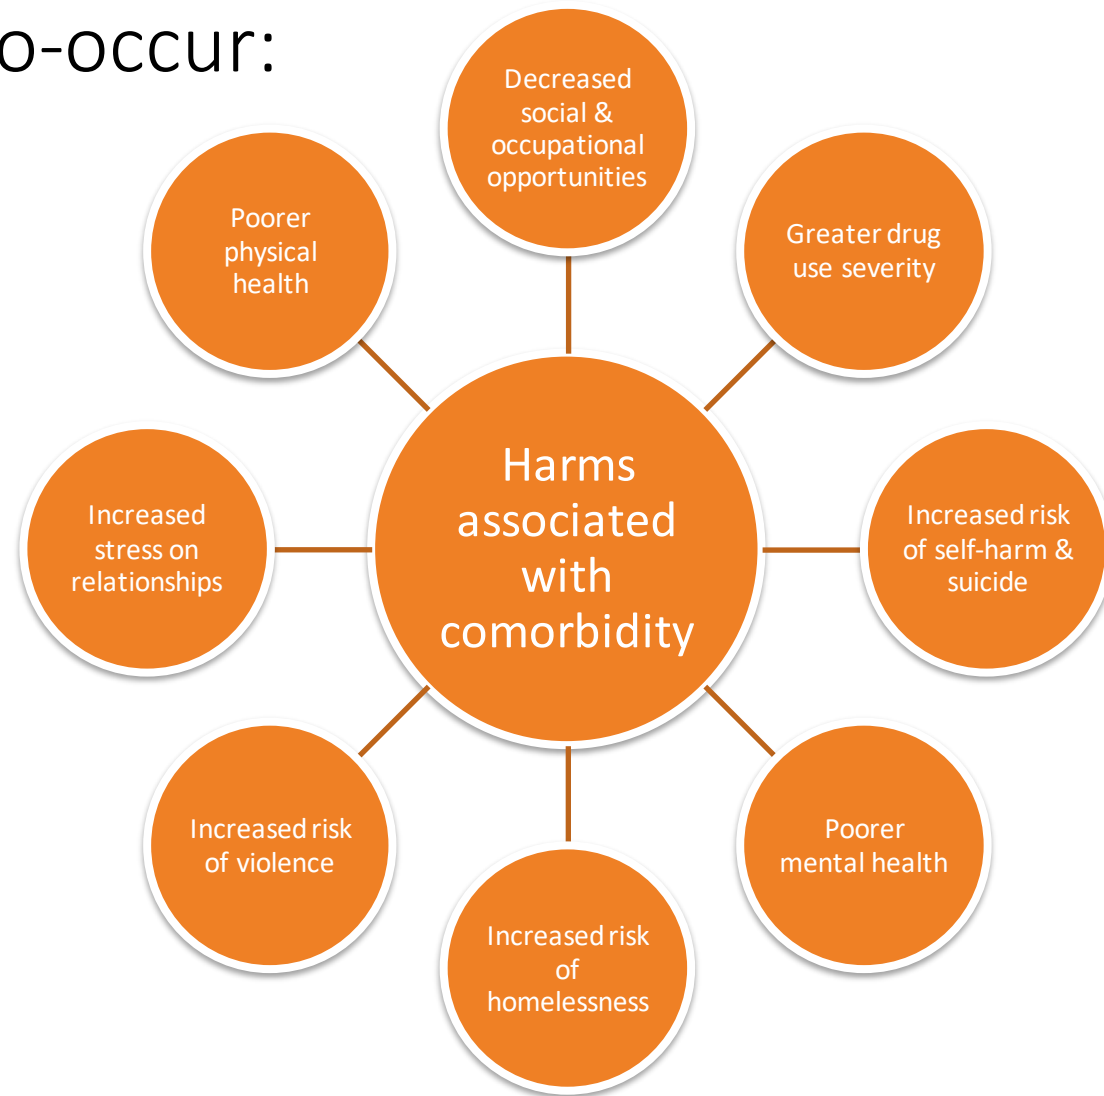

## Current issues in comorbidity

- Mental health (MH) and alcohol/other drug (AOD) use disorders two of Australia's most common & burdensome health conditions
-  Australians each year
- Co-occurrence is common
-  with AOD use disorder also meet criteria for mood or anxiety disorder
-  Australian clients in AOD treatment services meet diagnostic criteria for co-occurring MH disorder
- Co-occurring MH/AOD conditions both *underdiagnosed* and *undertreated*.

## Current issues in comorbidity

- When MH and AOD use conditions do co-occur:

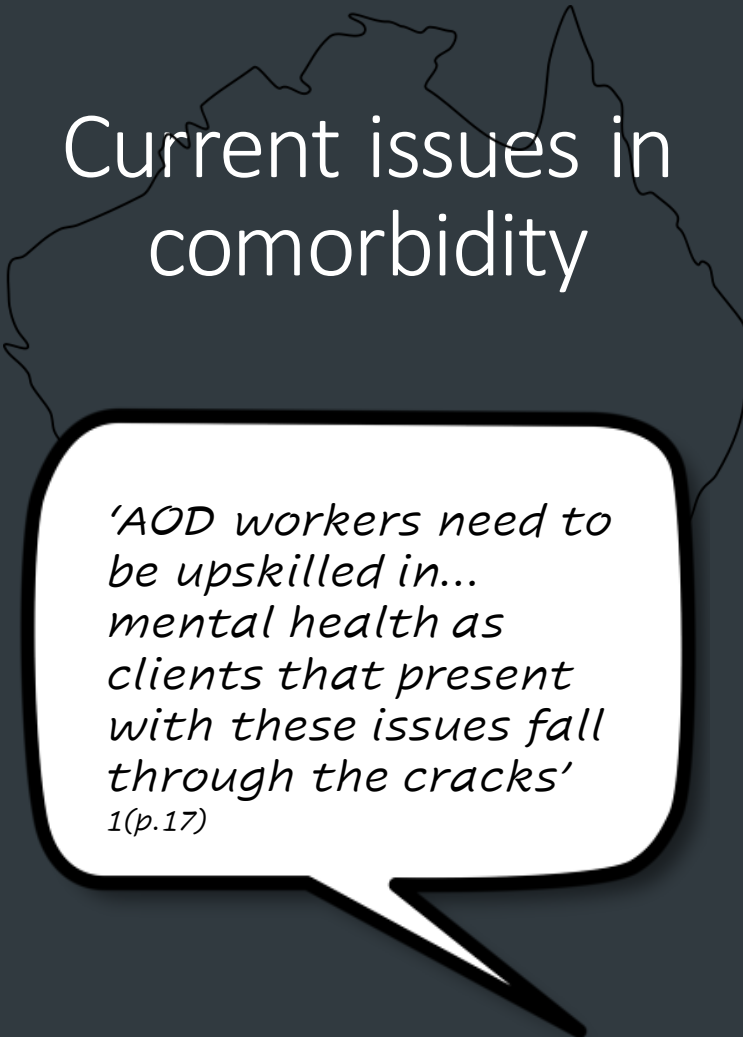

## Current issues in comorbidity

- A high priority population due to multiple biological, psychological, social risk factors
- Co-occurring MH/AOD conditions can complicate presentation, treatment and recovery
- AOD clinicians need to be aware of and manage (if not treat) co-occurring MH condition, take non-siloed approach
- Symptoms of co-occurring MH condition may impact on course of AOD condition and its treatment, and vice-versa
- Symptoms need not be diagnosable as a disorder to impact person's functioning and recovery

## Current issues in comorbidity

- Yet, people with co-occurring MH and AOD conditions benefit as much from usual AOD treatment as those with a single, standalone condition...

## Current issues in comorbidity

*'AOD workers need to be upskilled in... mental health as clients that present with these issues fall through the cracks'*  
1(p.17)

- Managing comorbidity remains top-cited challenge among AOD workers <sup>1</sup>:
  - Training gaps with this client group (62%)
  - Common client group (40%)
  - Barriers to accessing resources (financial costs, lack of time, find relevant training, geographic constraints)
- Need for accessible, evidence-based guidance to:
  - Improve workforce capacity
  - Promote best practice in the management of co-occurring MH/AOD use conditions
  - Optimise outcomes for clients

Under  
development  
(due 2022)

## Aims

- Increase AOD workers' knowledge and awareness of mental health conditions
- Improve the confidence and skills of AOD workers in relation to comorbidity
- Improve AOD workers' ability to identify mental health conditions
- Provide guiding principles for working with clients with co-occurring mental health conditions
- Provide practical information on the management and treatment of co-occurring mental health conditions
- Provide information regarding referral processes
- Provide resources that may be used to facilitate all of the above

**Part A:** What is  
comorbidity and  
why is it  
important?

**Part B:**  
Responding to  
comorbidity

**Part C:** Specific  
population  
groups

# Appendices

- Other Guidelines
- Other useful resources
- Research and information organisations
- DSM-5 and ICD-10 classification cross-reference
- Motivational interviewing
- Mental state examination
- Integrated Motivational Assessment Tool (IMAT)
- Additional screening tools
- CANSAS-P
- Kessler psychological distress scale (K10)
- Depression Anxiety Stress Scale (DASS 21)
- The Primary Care PTSD Screen (PC-PTSD)
- Trauma Screening Questionnaire (TSQ)
- Psychosis Screener (PS)
- Indigenous Risk Impact Screener (IRIS)
- Adult ADHD Self Report Scale (ASRS)
- Suicide risk screener scorer and interpretation
- Referral pro forma
- Cognitive behavioural techniques
- Anxiety management techniques

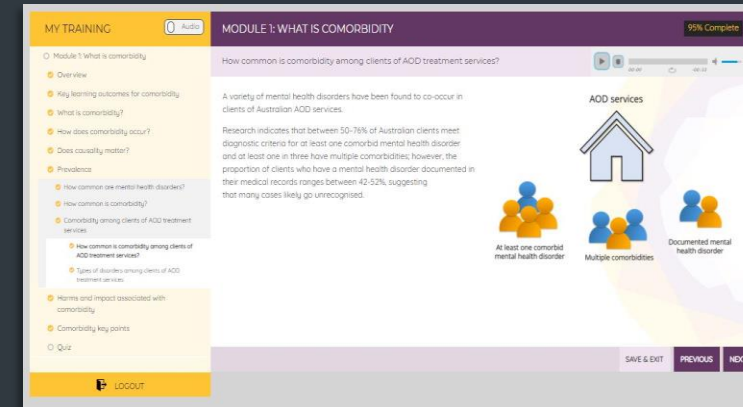

# Worksheets

- Identifying negative thoughts
- Cognitive restructuring
- Structured problem-solving worksheet
- Goal setting worksheet
- Pleasure and mastery worksheet
- Progressive muscle relaxation
- Controlled abdominal breathing
- Visualisation and imagery
- Food and activity diary
- Common reactions to trauma
- Common reactions to grief and loss

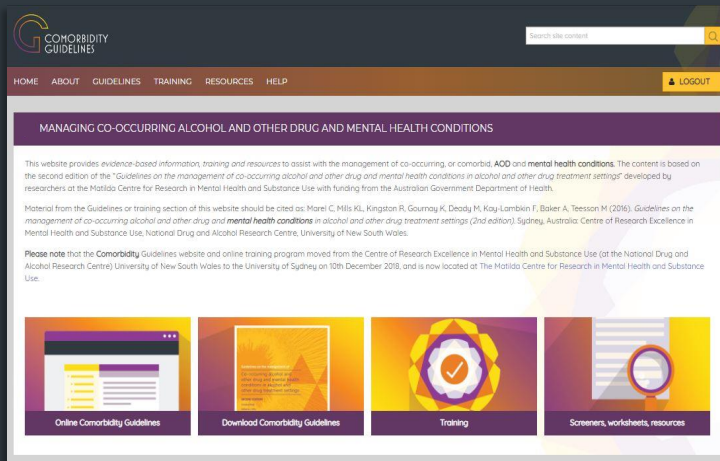

# Dissemination and translation

Hardcopy

Online  
training

trainer

Coming in 2021: [erin.madden@sydney.edu.au](mailto:erin.madden@sydney.edu.au)

# Hardcopies

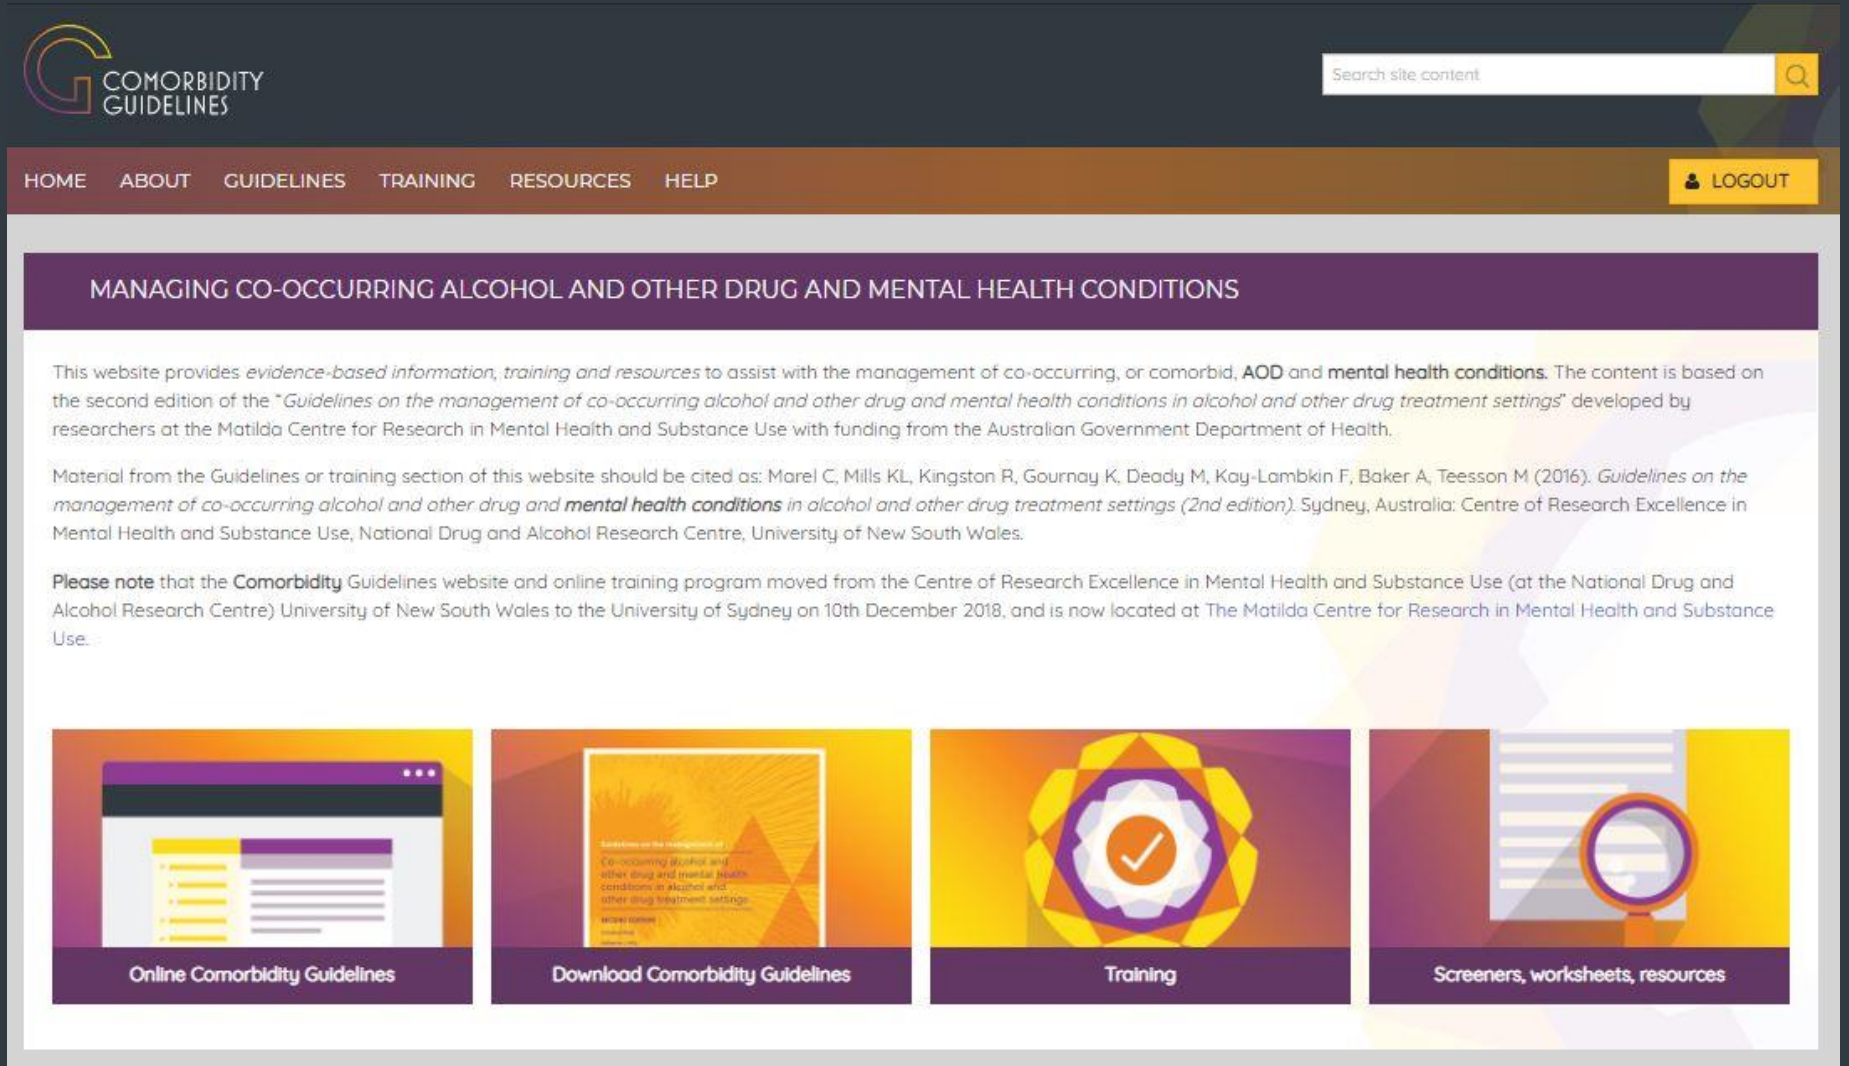

- 6,339 hardcopies distributed
  - Hardcopies from (final!) print run available now
  - Demand remains high
- Distributed >17,056 hard and soft copies

# Website

1,670,782

website visitors  
(since launch in 2017)

# Online training program

# Training Program

- 4,137 registrations
- 1020 completions
- Mandatory training

## Online training evaluation:

 **95%**  
gained skills

 **94%**  
found training  
useful

 **97%**  
satisfied

 **94%**  
greater confidence

**89%**  
 used what they  
had learned in  
clinical practice

 **59%**  
improved  
client  
outcomes

*I found the modules excellent and feel this resource would be a fantastic help with my professional growth*  
QLD Peer support worker

*I think we could equally say "what a great session" and "what a great resource". A couple of people had already used the resource and were singing its praises to the others afterwards.*  
TAFE NSW

*We already recommend the Guidelines as a standard text. Access to hard copies will be useful and the online resources look fabulous and will be used by students and trainers*  
TAFE VIC

*I've been doing the training and I think it's great. Thank you very much for putting this together*  
AOD treatment staff NSW

*... this is an excellent resource and I have recommended many people who I supervise to do the online training*  
Social worker

*My daughter is doing a Masters in psychology at Uni. I suggested that she do the AOD comorbidity guidelines training that I found on the comorbidity guidelines website. She found it so useful that she told her course supervisors who have recommended that every masters psychology student at Monash should do this!*

Current  
developments to  
promote best  
practice

- Comorbidity guidelines, website, training resources effective in improving knowledge, confidence and skills of AOD workers
- Essential they are based on best and most up-to-date evidence
- Crucial they are distributed to where they are most needed
- Responsive to need and reflect current climate

Further  
developments  
on the  
Comorbidity  
Guidelines  
project

Comorbidity  
Guidelines  
project

## Snapshot of consultation feedback

- Diverse feedback with strong consistent themes over EAP/DF
- Strongest recommendation = replication of guidelines for MH workforce
- Other feedback included more detail on particular areas, e.g.:
  - Trauma-informed care
  - Neurocognitive impairments
  - Stigma – its prevalence and impact
  - The role of peer-workers
- Currently working how best to address and incorporate feedback

# Thank you!
